

Press Release

COMPRION equips its IT³ family with ISIM option

Paderborn, Germany - May 2007

- Implementing IMS is nowadays seen as THE opportunity for operators to protect existing investment, increase revenue and maintain a competitive edge. COMPRION, as one of the world wide leading producers of test equipment for mobile communications, is actively supporting this technology by providing its IT³ products with two ISIM options. The ISIM modules are designed for everybody involved in developing value-added IMS services such as Push-To-Talk (PTT), Content and Video Sharing, Voice and Video over IP (VoIP) or Unified Messaging.

ISIM is an application integrated in the smartcard which contains security data and functions to authenticate the user to the IP Multimedia Subsystem (IMS). For testing the communication between the ISIM application and the mobile device, COMPRION now offers the two ISIM options IT³ ISIM Translator and IT³ ISIM Simulation.

The interoperability testing device IT³ Move! can be enhanced by the IT³ ISIM Translator, making it possible to visualize the communication during monitoring and field testing. Users of the development testing tool IT³ Prove! and the conformance tester IT³ Platform can supplement their test equipment with the IT³ ISIM Simulation. With this module, test engineers can not only make the communication transparent, but are also able to develop own test algorithms tailored to the special requirements of their systems.

As COMPRION provides the ISIM option for the whole IT³ family, customers have the continuing ability to interchange collected data between the three IT³ products and to configure further tests with the results.

By including these options, COMPRION, with its many years of expertise in test equipment, has once again proven to be at the forefront in developing innovative and customized solutions and keeping its products up-to-date with the newest technologies.
