

Press Release

The COMPRION SIMfony USAT package – a new product for Combined Handset Conformance Testing

Paderborn, Germany - October 2007

- During the GCF SG#32 Meeting in Paris, COMPRION presented a new product for combined USAT conformance testing covering the 3GPP TS 31.124 USAT tests listed in the Work Item 35. This package is currently undergoing validation for GCF and PTCRB.

COMPRION SIMfony is a new type of product being offered by COMPRION, to meet customer requirements for mobile handset USAT and USIM interface conformance testing.

“We have listened closely to our customers in the development of this new product for combined handset testing. COMPRION SIMfony allows our customers to perform their testing tasks in the most cost and time efficient way, and gives them the possibility to maximise efficient use of resources” says Managing Director Michael Wehmeier.

SIMfony is a testing system based on COMPRION products working seamlessly together with fully integrated products from our partners.

The COMPRION SIMfony USAT package combines the validated IT³ Platform or the IT³ Prove! with the Anritsu MD8470A signalling tester which supports functional testing of mobile terminal applications to perform 3GPP TS 31.124 USAT Test Cases.

The COMPRION SIMfony USAT package enables high performance testing, thanks to test system automation and intuitive user guidance. It offers easy software installation, integrated test system synchronisation and clear and efficient error debugging.
