

## Press Release

### COMPRION organised the 1<sup>st</sup> COMPRION Technology Day

Paderborn, Germany – July 2008

**COMPRION's first one-day customer event took place on the 17<sup>th</sup> June 2008 in Paderborn, Germany. It attracted more than 40 customers discussing the latest wireless network technologies of NFC, SWP and USB as well as combined handset testing.**

The 1<sup>st</sup> COMPRION Technology Day surpassed expectations. Chip, mobile, and card manufacturers as well as network operators and test laboratories from over 20 companies joined the event to learn about new technologies and testing opportunities, talk with experts from COMPRION's development departments and exchange experiences.

Diverse topics of interest were covered in two simultaneous streams. Stream 1 focused on the introduction of the USB and SWP interface and offered deep insight into the requirements and methods for ISO/SWP/USB/NFC testing. Stream 2 concentrated on different concepts of combined handset testing and presented an approach to efficient handset testing by using test automation.

Summarising, Yvon Gressus of Gemalto, stated: "The event demonstrated the ability of the industry to integrate new protocols such as USB and SWP in the smart card world. It also showed how these new technologies can be successfully implemented by using reliable test tools."

Peter Tondorf of CETECOM shared the same sentiments: "Stream 1 was of particular interest to me and provided in-depth information about the new technologies. It was definitely worth my time to be at this event."

Ralf Maier from the operator Telefónica O2 Germany, added: "The COMPRION Technology Day was a very good complement to the general industry events such as SIMposium, Cartes and Mobile World Congress."

Thanks to the good response, a second COMPRION Technology Day will follow. Information will be found on our website and announced via email. In the meantime, if you have any questions, please contact [info@comprion.com](mailto:info@comprion.com).
