COMPRION presents NFC -ISO/IEC 14443 Protocol Analyser at 3GSM in Barcelona

Barcelona – February, 2007

– During this year 3GSM event in Barcelona there is no doubt that NFC/Contactless technology and solutions will be one of the hottest subjects of discussion. As the market is working out the best practices for the implementation of the technology COMPRION is supporting this process by launching an ISO/IEC 14443 test device named CLT Move!

“As the product covers the most frequently used protocol for near field contactless solutions and applications, we can already serve development companies with a device for the tracing of the communication between their contactless chip and corresponding reader” said Michael Wehmeier, Managing Director of COMPRION.

Using experiences made by earlier COMPRION developments gave the company the competitive edge, to be the first on the market to present a test device for the testing of contactless technology, with the same stability and accuracy which COMPRION customers all over the globe are used to from the testing of contact technology with COMPRION equipment.

“With the ISO/IEC 14443 protocol tester CLT Move! we have created the baseline tool for NFC application testing. The concept of our new contactless test tool allows us to easily integrate all kind of contactless applications built on ISO/IEC 14443 technology. We have proven this by implementing the e-Passport application for the ID market, which we proudly presented at the Cartes exhibition in November 2006. Now we are looking forward to new applications within the NFC community.” said Mr. Wehmeier.

Users of the CLT Move! will find a small, robust and portable device with the typical COMPRION design philosophy. Rounded up with the sophisticated support and service offers, directly from COMPRION, the CLT Move! appears at the exhibition in Barcelona as one of the “Must see” new products this year.
