

Press Release

COMPRION launches first all-in-one ISO/SWP/USB interoperability tracer on the market – The COMPRION Move 2

Paderborn, Germany - February, 2008

The whole telecom world is currently talking about USB Interchip, SWP (Single Wire Protocol) and NFC. Companies that are seriously integrating these technologies into their products look for test equipment that can fulfil these needs already. COMPRION has launched the Move 2 – an innovative tool for simultaneously monitoring and analysing the communication on the ISO, SWP and USB interfaces.

All sectors of the mobile industry, from chipset manufacturers, chip card producers and handset manufacturers through to operators, are encountering this new technology challenge. The COMPRION Move 2 has been created to support the early development stages of SWP and USB implementations as well as the long established ISO 7816 Chip Card protocol.

Weighing less than 1 kg, the Move 2 can be taken almost anywhere. Connected via USB-port to a portable computer, the electrical, protocol and application level activities on the (U)SIM interface are monitored and recorded. Thus, this powerful device can easily detect malfunctions and analyse them accordingly.

Move 2 can be enhanced by the Analog Scope, an oscilloscope functionality which is unique for a trace tool. It allows outstandingly detailed electrical measurement and analysis of the SWP, USB or ISO card contact activity.

With the new COMPRION SyncBus, a bus for synchronising different COMPRION test tools, the Move 2 can be synchronised with the COMPRION CLT Move ISO 14443 protocol monitoring tool for simultaneous ISO/SWP/USB and NFC/ISO 14443 contactless communication.
