

## File Tree Express 2.1.4

Software for Editing File Trees

01  
02

File Tree Express is an easy-to-use software for viewing and editing data fields stored on smart cards. It supports both 2G and 3G technologies with SIM, R-UIM, USIM, CSIM and ISIM applications.

With File Tree Express, you can scan smart cards and save their contents on disk for offline usage. You can compare file trees and create your own file trees and scripts.

### General Features

- Explorer-like navigation of file trees
- Support of SIM, R-UIM, USIM, CSIM and ISIM applications
- Scanning of smart cards
- Creation of customer-specific file trees
- Updating of EF contents
- Comprehensive interface for viewing file access conditions
- Find/look-up functionality
- Copy/paste single EFs or a range of EFs to and from different file trees
- Translation of EF contents
- Comparison of different file trees
- Creation of command sequences
- Creation of personalization scripts
- Viewing of APDUs during card scan or data update
- Wizard for creating new files
- Resizing of EFs
- Export/import of file trees to/from different file formats (XML, Excel, UXP)
- Support of any PC/SC-compliant smart card reader

# Specification
